WOODEN FLOORS

*enjoy the charm and warmth of a wooden floor*

## Why choose Qualycork clic wood?

### ECO-FRIENDLY

Protecting and preserving the environment is the core element of our philosophy. That is why we continuously monitor our production processes, energy consumption and waste handling. We make sure that all the wood we use come from sustainable, well-managed forests. To optimize the use of these valuable raw material resources, we only use a thin layer of wood to make each plank.

### SUPERIOR CONSTRUCTION

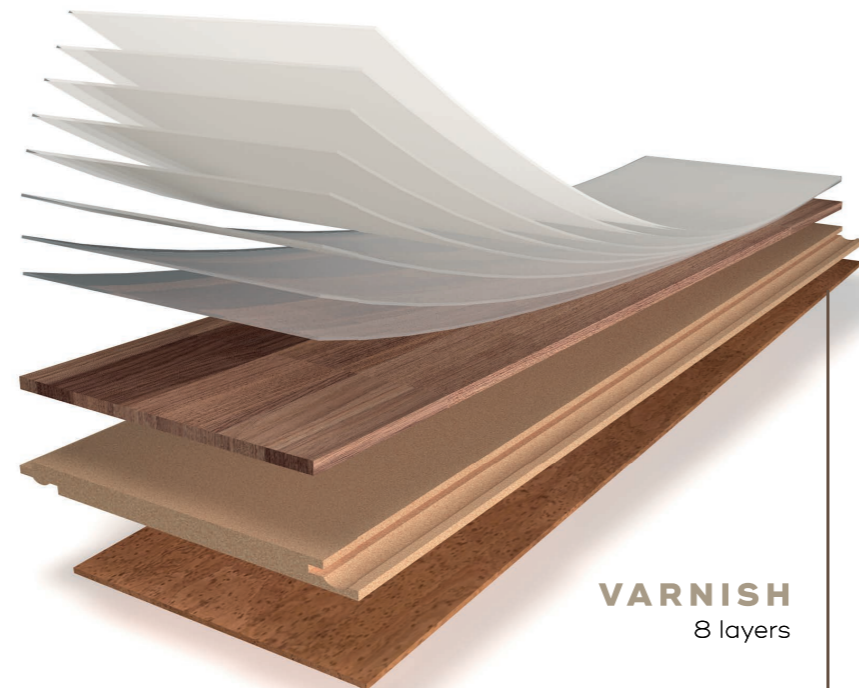

Engineered flooring is crafted to outperform solid hardwood. It is made up of the best wood raw materials, high quality HDF (high-density fibreboards), 8 layers of UV cured finish and a cork underlayment. The result is an extremely durable floor that offers living comfort.

### COMMERCIAL GRADE FINISH

High performance finish is ideally suited for heavy traffic patterns, thanks to the abrasion resistant and anti-microbial properties. Your durable floor will remain beautiful in demanding applications.

### ATTACHED 2MM CORK UNDERLAYMENT

Our professionally tested cork bottom layer is a natural product with excellent insulating characteristics. Sounds and vibrations are easily absorbed to make the floor pleasant to walk on. Cork is also flame retardant and moisture resistant which helps keeping the floor free from bacteria.

### COMPETITIVE WARRANTY

All products are tested under rigorous international quality standards, which is why we grant an extensive residential and commercial warranty. You can count on our floors to last for many years ahead.

### SUSTAINABLE DESIGN

This product is made with the highest grade raw materials from sustainable forests to meet rigid standards. No VOC's (Volatile Organic Compounds) or solvents are used.

### COMMERCIAL GRADE FINISH

High performance finish is ideally suited for heavy traffic patterns, thanks to the abrasion resistant and anti-microbial properties. Your durable floor will remain beautiful in all demanding applications.

### REAL WOOD VENEER

The wear layer is authentic natural hardwood. Each plank is unique and different. Warm modern styles complement any decor and it looks great on its own.

### ULTRA DENSE CORE

Our durable CARB II HDF core is even denser than solid hardwood providing stronger impact resistance than most floors available out in the market.

### EASY INSTALLATION

Edges are precision milled for an unique profile to allow an easy installation. This patented technology securely locks two planks together for zero gapping during seasonal change.

### RADIANT HEAT COMPATIBLE

This product is perfectly compatible with radiant heat systems.

#### EASY INSTALLATION WITH UNICLIC®

This allows two panels to connect together securely without screws or glue. Installing hardwood flooring has never been easier.

#### SEALED EDGES

Edges are milled and sealed to prevent moisture into the core and causing damages. This ensures that your flooring will be at its best possible condition.

#### RADIANT HEAT COMPATIBLE

The floors work well over an underfloor heating as long as the radiant heating system does not go above 28 degrees Celsius.

#### QUALITY ASSURANCE

Every product in this collection is backed by our Lifetime Structural Warranty, 30 year Residential Wear Warranty and 10 Year Light Commercial Warranty.
