

WINDOW INSULATION KIT

ECOSAVERS

EcoSavers® Window Insulation Kit

The Window Insulation Kit from EcoSavers® is developed for single layer glass windows. With this kit you can create an extra layer between the glass and the room. The air between the glass and the plastic window insulation film act as an insulator, similar to the double glazed window systems.

The kit contains 2 sheets of 157 x 120 cm and 17,5 meter strong double sided adhesive tape.

3. Shrink the film by hot air using a hairdryer

4. Cut off the remaining parts of the film

1. Place the adhesive tape around the window frame

2. Attach the film to the adhesive tape

The film in this kit is 50% thicker than similar systems on the market which guarantees a much stronger and durable installation of the film.
