

CELLULOSE ISOLATIE

geproduceerd in Zweden volgens de meest duurzame technologie

Cellulose matten
een revolutie in
duurzaam
isoleren!

Gemaakt van oude
kranten

Hoge warmteopslag
capaciteit

Hoge
isolatiewaarde
 $\lambda = 0,036$

Brandveilig

Vocht regulerend

Geen irritatie aan huid en
luchtwegen

Hoge akoestische
demping

100% natuurlijk en
herbruikbaar

INFORMATIE

CIRCULAIR ISOLEREN VOOR ULTIEM WOONCOMFORT

een gezond, veilig en stil huis op een schone planeet

Van afval naar grondstof	Vocht isolatie	Warmte isolatie	Geluid isolatie	Brandveilig
<p>Van oude kranten naar hoogwaardig isolatiemateriaal</p> <p>iCell® biedt :</p> <ul style="list-style-type: none"> ○ Circulaire producten gemaakt van afval. Met elk product dat u koopt verkleint u de afvalberg ○ In een gloednieuwe fabriek in Zweden produceren we met behulp van de meest duurzame en moderne technologie 	<p>Het binnenklimaat in de ruimte op een natuurlijke wijze regelen</p> <p>iCell® biedt :</p> <ul style="list-style-type: none"> ○ Damp-open isolatiemateriaal ○ Optimaal vochtregulerend vermogen waardoor vocht kan worden opgeslagen en afgegeven (gebouw kan ademen) ○ Door de natuurlijke vezels krijgen schimmels en vochtplekken geen kans 	<p>Genieten van warmte-isolatie met een fase verschuiving van > 12 uur</p> <p>iCell® biedt :</p> <ul style="list-style-type: none"> ○ Ongeëvenaarde temperatuurdempings-factor ook wel warmteopslag-capaciteit (de tijd die de warmte nodig heeft om door de isolatie heen te komen) is circa 4 maal hoger dan bij minerale wol 	<p>Genieten van meer rust door betere akoestische isolatie</p> <p>iCell® biedt :</p> <ul style="list-style-type: none"> ○ Betere geluidisolatiewaarden dan traditionele vezelmatten, omdat de vezels flexibeler zijn en natuurlijk meevenen met de geluidstrillingen ○ De open structuur zorgt er bovendien voor dat luchtbeweging door wrijving wordt omgezet in warmte 	<p>Brand vertragend door beter intact houden van de constructie</p> <p>iCell® biedt :</p> <ul style="list-style-type: none"> ○ Cellulose dat is behandeld met 100% natuurlijke brandvertragers ○ Optimale bescherming van houten constructies doordat het materiaal verkoolt. Deze verkoolde laag werkt als extra isolator tegen brand ○ Afkoelend effect door de aanwezigheid van vocht in de cellulose keten

Bijdrage aan een betere planeet en een hogere waarde van uw vastgoed

Gezond en comfortabel binnenklimaat

Koel in de zomer
Warm in de winter

Een aangename rust in de woon- en werkruimtes

Meer tijd om je kostbaarste bezit in veiligheid te brengen

iCELL CELLULOSE ISOLATIE

Een win-win voor 3 verschillende partijen in de keten

1 GOED VOOR DIEGENE DIE HET INSTALLEERT

- iCell-cellulose isolatie is een natuurlijk materiaal en geeft geen irritatie aan huid en luchtwegen
- iCell-cellulose isolatiematten zijn makkelijk te verwerken

2 GOED VOOR DIEGENE DIE ER IN WOONT OF WERKT

- iCell-cellulose isolatie zorgt voor een gezond en comfortabel binnenklimaat
- iCell-cellulose isolatie biedt een duurzame en uitstekende bescherming tegen geluid, warmte en vocht

3 GOED VOOR HET MILIEU

- iCell-cellulose isolatie is een van de milieuvriendelijkste isolatie materialen met een positieve CO₂ afdruk en vrij van schadelijke boorzetonen

EEN GREEP UIT ONZE PROJECTEN NIEUWBOUW EN RENOVATIE

iCell Skiva data sheet

Possibly the most important event in the insulation business since the 60s

Description

iCell Skiva is a flexible insulation batt for walls, roofs and floors. iCell is using environmentally-labelled used newsprint being produced from pure cellulose fibres from softwood. The batt is held together with bonding fibres. Boron-free flame retardant is added. It is manufactured in a dry process with low energy consumption in a modern factory in Älvdalén, Sweden.

iCell Skiva is an excellent insulation against cold and heat thanks to low heat conductivity and high air flow resistance stopping convection. At the same time the insulation attenuates unwanted sounds and noise efficiently thanks to its structure and high density. The cellulose fibre has hygroscopic properties so that moisture in air is taken up and given away. That makes the building breathe, moisture is dried out without condensation.

The batts are easy to install thanks to their form stability, the ease of cutting them to size, and that they do not irritate your skin or your respiratory tract.

Assessments

iCell Skiva is certified in BASTA (SE) and has Classification A in SundaHus Material Data. Construction Product Declaration is given as eBVD with Swedish Association of Construction Product Companies (Byggmaterialindustrierna).

Application and Installation

The dimensions of iCell Skiva are adapted to common frame distances for walls, pitched roofs and floors. They are flexible and fill out the space. The batt can easily be cut for other distances. Towards the inner warm space a vapour retarder is installed as climate envelope. iCell Skiva must not be used without surfacing. The product should be protected against moisture and dirt before installation.

Article	Dimensions [mm]	Batts/ pack	m ² / pack	m ² / pallet	Art.no. package	Order no. pallet

lifestyle for green energy

iCell Skiva is easy to handle, gives off little dust and provides a sound working environment

iCell Skiva is easy to cut, and we recommends our own toothless insulation saw

iCell Saw is developed together with Bahco

Product marking

iCell Skiva is CE marked and has the Declaration of Properties B-7350081-77000-6-1 in accordance to EU-Regulation no. 305/2011.

Packing materials

iCell Skiva is packaged in packages of polyethylene plastics. The packages are stacked on wooden one-way-palettes and covered by outer packing of clear polyethylene plastic. The material can directly be used for material or thermal recycling.

Environment and sustainability

The raw material for iCell Skiva consists primarily of recycled newsprint. The electric energy for manufacturing is renewable from wind power and hydropower. No emissions to water, air or soil occur from manufacturing. Insulation is voluminous and is transported by truck. The environmental impact is minimised via efficient planning. In the use phase of the building the insulation reduces the energy consumption for both heating and cooling. When the building is decommissioned the insulation can be reused as batts if it is not damaged or alternatively recycled as loose fill.

Insulation Technology™

Made in Sweden

For warm, silent, and sound buildings with environmentally friendly cellulose insulation

Description

iCell Lösull is a cellulose insulation for walls, roofs and floors. iCell is using environmentally-labelled used newsprint being produced from pure cellulose fibres from softwood. It is manufactured in a dry process with low energy consumption in a modern factory in Älvadalen, Sweden.

iCell Lösull is an excellent insulation against cold and heat thanks to low heat conductivity and high air flow resistance stopping convection. At the same time the insulation attenuates unwanted sounds and noise efficiently thanks to its structure and high density. The cellulose fibre has hygroscopic properties so that moisture in air is taken up and given away. That makes the building breathe, moisture is dried out without condensation.

Assessments

iCell Lösull has the European Technical Approval ETA-13/0658, the status Recommended in the Construction Product assessment (Byggvarubedöningen), iCell Lösull is registered in BASTA (SE) and has Classification A in SundaHus Material Data. Construction Product Declaration is given as eBVD with the Swedish Association of Construction Product Companies (Byggmaterialindustrierna).

Application and Installation

Installation of loose fill insulation must be done by an authorised installer with the right equipment and experience. The loose wool is dry blown to a certain density in enclosed designs. The insulation layers are created without joints and fill out efficiently. Towards the inner warm space a vapour retarder is installed as climate envelope. With an open exposed installation the loose wool is sprayed to a certain height with settlement taken into account. The installed loose wool shall not be exposed directly to weather or have ground contact. The product should be protected against moisture and dirt before installation.

Article	kg / bag	kg / pallet	Bag / pallet	Layers / pallet (height pallet)	Art.no bag	Order no. pallet
iCell Lösull 14	14	294	21	7 (240 cm)	07350081770150	77350081770159
iCell Lösull 14	14	336	24	8 (273 cm)	07350081770150	87350081770156

iCell Lösull saves on material as there is no wastage, only the exact amount is installed for each installation. The remainder of the insulation is taken back and can be used for the next building job

iCell Lösull provides a insulation layer without joints and the material can both be used in old and new designs

iCell Lösull combines a high density with a high thermal inertia for better insulating capability, and with its air flow resistivity a excellent sound proofing is given

Product marking

iCell Lösull is CE marked and has the Declaration of Performance B-7350081-77000-6-2 i in accordance to EU-Regulation no. 305/2011.

Packing materials

iCell Lösull is packaged in polyethylene bags. The bags are stacked on wooden Euro palettes and covered by outer packaging of clear polyethylene plastic. The palettes are part of a return system and the outer packaging can directly be utilised for material or thermal recycling.

Environment and sustainability

The raw material for iCell Lösull consists primarily of recycled newsprint. The electric energy for manufacturing is renewable from wind power and hydropower. No emissions to water, air or soil occur from manufacturing. Insulation is voluminous and is transported by truck. The environmental impact is minimised via efficient planning. In the use phase of the building the insulation reduces the energy consumption for both heating and cooling. When the building is demolished or taken apart the insulation can be reused.

Technical properties

Property	Value	Norm
